

Data Fort - Complete Entity Relationship Diagram

Aligned to ApplicationDbContext and the three EF Core migrations in DATA FORT V 12.0. Includes all 9 tables, PK/FK fields, unique constraints represented in the model, Folder self-reference, and relationship cardinalities.

Delete behavior: Role->User uses Restrict; token/folder/document/credential/share/audit relationships are configured with NoAction; Folder->Folder (ParentFolder) is also NoAction. This diagram describes the database model, not application authorization rules.
